

FLOODGUARD

Website Content + Navigation Master

Homepage · Products · Platform · Solutions · About · Get Started · Insights

Final working content architecture for the website team

Positioning

Flood intelligence across time — historical, current and future — translated into decision-ready intelligence for organizations exposed to flood risk.

Status: Content architecture and copy direction locked for current website iteration.

1. WEBSITE NAVIGATION

Primary navigation:

Home | About Us | Products ■ | Platform ■ | Solutions ■ | Insights | Contact

Right-side primary CTA: GET STARTED

Secondary product CTA in the navigation: EXPLORE DISTRICT RISK

Products dropdown

- Explorer — free historical district/taluka flood intelligence.
- Atlas — premium historical + current + future flood intelligence.
- Live — real-time rainfall, radar, risk and alerts.

Platform dropdown

- Platform Overview
- Technology
- Data
- Methodology
- Validation
- API

Solutions dropdown

- Insurance & Reinsurance
- Banking & Finance
- Government & Disaster Management
- Infrastructure & Engineering
- Agriculture & Food Security

Insights

- Research
- White Papers
- Use Cases
- Data Stories
- Articles

Footer navigation

- Products: Explorer, Atlas, Live
- Platform: Technology, Data, Methodology, Validation, API
- Solutions: Insurance, Banking, Government, Infrastructure, Agriculture
- Insights: Research, White Papers, Use Cases, Data Stories, Articles
- Company: About Us, Contact, Careers
- Legal: Privacy, Terms

2. CUSTOMER ACQUISITION + NAVIGATION FUNNEL

The site should work as a product-led funnel rather than a collection of disconnected corporate pages.

Stage	User intent	Primary destination	CTA
Discover	Understand FloodGuard	Home	Explore District Risk / Get Started
Experience	Try the intelligence	Explorer	Explore Your District
Deepen	Need future/advanced analytics	Atlas	Request Atlas Access
Monitor	Need operational awareness	Live	Open FloodGuard Live
Evaluate	Assess organizational fit	Solutions	View sector solution
Trust	Understand science and credibility	Platform / About	Explore Platform
Convert	Start a business conversation	Get Started	Request Access / Book Demo
Engage	Research and learning	Insights	Read / Download / Explore

Core journey: Home → Explorer → Atlas → Enterprise conversation. Live serves the operational use case, while Platform/Solutions/Insights build trust and intent.

3. HOMEPAGE

Hero

Eyebrow: ENTERPRISE FLOOD INTELLIGENCE · INDIA · PRIVATE PREVIEW

Headline: KNOW THE FLOOD BEFORE IT ARRIVES.

Copy: FloodGuard turns decades of observed climate and flood data into forward-looking flood intelligence — helping organizations understand risk across India's districts and talukas.

CTAs: EXPLORE DISTRICT RISK → (opens Explorer) | GET STARTED → (conversion pathway)

UX: India district-risk map with subtle historical → current → future timeline. Do not use fake live alerts or fabricated current numbers.

The Flood Problem

Headline: FLOOD RISK IS CHANGING. THE WAY WE ASSESS IT HASN'T.

Copy: Flood risk is no longer defined by what happened in the past. Changing rainfall patterns, expanding exposure and evolving climate conditions are reshaping where and how losses occur. Yet many important decisions still depend on fragmented, historical or coarse risk information.

- BACKWARD-LOOKING — Past data doesn't fully describe future risk.
- TOO COARSE — Risk gets lost between the district and the asset.
- FRAGMENTED — The data exists. The intelligence is scattered.

Closing: The challenge isn't a lack of data. It's turning the right data into usable intelligence when a decision needs to be made.

Decision Gap

Headline: DATA ALONE DOESN'T ANSWER THE DECISION.

Visual: Rainfall + Flood History + Terrain + Drainage + Satellite Data + Climate Projections + Exposure → FLOODGUARD → DECISION

75 Years of India's Flood Story

Eyebrow: OBSERVED RECORD · 1951–2025

Headline: 75 YEARS. ONE FLOOD STORY.

Copy: FloodGuard reconstructs and analyses India's flood and climate record from 1951 onward — creating a consistent historical foundation for understanding how risk has evolved.

Metrics: 75+ years observed | 766 districts analysed | 6,512 talukas mapped

CTA: EXPLORE THE RECORD →

Atlas

Headline: UNDERSTAND FLOOD RISK ACROSS TIME.

Copy: Historical intelligence, current risk and future climate projections in one view.

Visual: 1951 → TODAY → 2100

CTA: EXPLORE ATLAS →

Live

Headline: KNOW WHAT'S HAPPENING NOW.

Copy: Real-time rainfall, flood signals and changing conditions to support faster operational decisions.

CTA: EXPLORE LIVE →

Explorer

Headline: START WITH YOUR DISTRICT.

Copy: Explore historical flood risk across India's districts and talukas.

CTA: EXPLORE DISTRICT RISK →

Decision Support

Headline: FROM FLOOD RISK TO ACTIONABLE INSIGHT.

- Flood Vulnerability Atlas — Where is risk concentrated?
- Portfolio Exposure Screening — Which assets or locations are exposed?
- Drainage Capacity Assessment — Where could drainage constraints amplify risk?
- Property & Site Risk Analysis — What does flood risk look like at a specific location?

Platform

Headline: DATA IN. INTELLIGENCE OUT.

Visual: DATA → MODELS → RISK → DECISION

CTA: EXPLORE THE PLATFORM →

Who We Serve

Headline: FLOOD INTELLIGENCE FOR DECISIONS THAT MATTER.

- Insurance — Underwrite flood risk with greater confidence.
- Banking & Finance — See flood risk inside the loan book.
- Government — Plan better. Protect earlier.
- Infrastructure — Build for changing flood exposure.
- Agriculture — Understand flood risk where crops are exposed.

Why FloodGuard

Headline: BUILT ON OBSERVED DATA. BUILT FOR BETTER DECISIONS.

- 75+ years of observations
- District → taluka intelligence
- Historical → current → future
- Science-driven, decision-ready

CTA: WHY FLOODGUARD → (anchors to About)

Get Started

Headline: READY TO UNDERSTAND FLOOD RISK DIFFERENTLY?

CTA: GET STARTED →

Routes to Explore District Risk | Request Early Access | Talk to FloodGuard

4. FLOODGUARD EXPLORER

Role: Free public discovery layer. Historical district/taluka risk + basic analytics; deeper future projections and advanced analytics belong to Atlas.

Hero

START WITH YOUR DISTRICT.

Explore historical flood risk across India's districts and talukas.

CTA: EXPLORE YOUR DISTRICT →

Core sections

- Search — Search district or taluka.
- District Overview — Historical flood risk, rainfall pattern, flood events.
- Flood History — 1951 → 2025 timeline.
- Rainfall Trends — Long-term rainfall patterns.
- Spatial View — District/taluka map.
- District Report Preview — Risk summary, history, rainfall and map.
- Atlas Upgrade — Future projections, climate scenarios, advanced analytics, reports and enterprise capabilities.

UX: Large India district map; simple search; selected district panel; historical timeline. No enterprise dashboard chrome.

Free vs Atlas: Explorer = historical/basic. Atlas = historical + current + future, advanced analytics, deeper geography, portfolio analysis and reports.

Final CTA: START WITH YOUR DISTRICT →

5. FLOODGUARD ATLAS

Role: Premium flood intelligence platform. Core question: How could risk evolve across past, present and future?

Hero

UNDERSTAND FLOOD RISK ACROSS TIME.

FloodGuard Atlas brings historical intelligence, current risk and future climate projections together to help organizations understand how flood exposure could evolve across India.

Time spine: 1951 → TODAY → 2100

CTA: REQUEST ATLAS ACCESS → | EXPLORE THE FREE EXPLORER →

Core capabilities

- Historical intelligence — flood records, rainfall trends, frequency, patterns.
- Current risk — baseline risk, vulnerability layers, geographic comparison.
- Future projections — 2030, 2050, 2100; scenario-based future intelligence.
- Risk & vulnerability — rainfall, terrain, drainage, flood history, climate, exposure, vulnerability.
- Taluka-level intelligence — move beyond district-level understanding.
- Advanced analytics — risk scoring, return-period analysis, scenario analysis, comparisons.
- Portfolio & asset analysis — portfolio screening, property/site exposure, geographic concentration.
- Reports & outputs — maps, risk reports, location summaries, portfolio analysis, custom outputs.

How Atlas Works

LOCATION / PORTFOLIO → FLOODGUARD ANALYSIS → DECISION-READY OUTPUT

UX

Use an intelligence plate: large map + time spine + analytical visualizations. Avoid making Atlas look like Live.

Final CTA: UNDERSTAND YOUR FLOOD EXPOSURE ACROSS EVERY HORIZON THAT MATTERS. →
REQUEST ATLAS ACCESS

6. FLOODGUARD LIVE

Role: Real-time flood awareness, monitoring and response platform.

Hero

KNOW WHAT'S HAPPENING. ACT BEFORE IT ESCALATES.

FloodGuard Live brings rainfall, radar, flood-risk signals and ground information together to help teams monitor changing conditions and respond faster.

CTA: OPEN FLOODGUARD LIVE → | REQUEST EARLY ACCESS →

The 3R Framework

[3R FRAMEWORK — INSERT FLOODGUARD'S FINAL ESTABLISHED THREE R LABELS]

Use the three Rs as the signature Live framework. Do not invent or rename the internal labels.

Live Signals

- Rainfall monitoring
- Radar imagery and playback
- Flood-risk signals
- Location intelligence
- Community/field reports
- Alerts and notifications

48-Hour Advance Risk Signals

Headline: MORE LEAD TIME FOR PREPAREDNESS.

FloodGuard Live is designed to provide advance risk signals that help teams prepare before conditions peak. Where conditions and model confidence support it, alerts can provide up to 48 hours of advance indication of elevated flood risk.

Important wording: Advance warning is probabilistic intelligence — not a guarantee that every flood event can be predicted 48 hours in advance.

Dashboard + App

Dashboard: risk map, rainfall map, radar, alerts, location detail, outlook, reports.

Mobile app: current risk, rainfall, nearby reports, field observations, photos, water-depth categories, road/accessibility status.

Operational Flow

DETECT → SCORE → ALERT → DISSEMINATE → MONITOR IMPACT

Before / During / After

- Before — prepare using emerging risk signals.
- During — monitor, respond, verify conditions.
- After — retain evidence, identify recurring hotspots, support future planning.

UX: Dark operational interface, map/radar/alerts/timestamps. Never show simulated information as live operational data.

7. FLOODGUARD PLATFORM

Role: Trust + intelligence infrastructure page. It answers: What is FloodGuard built on, and why should I trust it?

Hero

THE INTELLIGENCE BEHIND FLOODGUARD.

FloodGuard combines observed climate data, geospatial information, flood intelligence, climate models and analytical methods to turn complex environmental signals into decision-ready flood-risk intelligence.

DATA → MODELS → RISK → DECISION

Core sections

- Data Foundation — observed climate, satellite/remote sensing, terrain/geography, flood/hydrological information, climate projections.
- Data Pipeline — ingest → quality control → harmonise → analyse.
- How FloodGuard Works — multiple signals brought together.
- Risk Framework — Hazard × Exposure × Vulnerability.
- Spatial Intelligence — India → State → District → Taluka → Site/Asset.
- Time Intelligence — Past → Present → Future.
- Climate Models — CMIP6, scenarios, ensembles, downscaling, uncertainty.
- Modelling & Analytics — statistical, machine-learning and climate-modelling approaches where appropriate.
- Validation — historical backtesting, observed flood information, model skill and uncertainty.
- Transparency — data provenance, documented methods, validation, uncertainty, continuous improvement.
- Integration — maps, reports, APIs/data services and organizational workflows.
- Collaboration — research, data, technology, government and institutional collaboration.

UX: Scientific, transparent, technical and calm. Use diagrams and data-layer visuals, not a dashboard.

Important governance: maintain one canonical technical specification before publishing exact counts, scenario names or projection periods that may vary between internal versions.

8. FLOODGUARD SOLUTIONS

Role: Solutions landing page. Show all sectors; detailed sector pages will be developed after use-case research is finalized.

Hero

FLOOD INTELLIGENCE FOR DECISIONS THAT MATTER.

Flood risk affects different organizations in different ways. FloodGuard provides geographic, historical, future and real-time flood intelligence for sectors exposed to changing risk.

Common Problem

EVERY SECTOR SEES FLOOD RISK DIFFERENTLY.

Insurance asks: What could this exposure mean for our portfolio? Banking asks: Where is flood risk concentrated in our lending? Government asks: Where should we prepare first? Infrastructure asks: Is this site resilient to future flood conditions? Agriculture asks: Where could flooding affect crops and livelihoods?

Sectors

- Insurance & Reinsurance — Underwrite flood risk with greater confidence. Applications: portfolio screening, location risk, forward-looking analysis, parametric data, exposure concentration.
- Banking & Finance — See flood risk inside the loan book. Applications: portfolio exposure, collateral assessment, geographic concentration, climate-risk assessment, stress-testing inputs.
- Government & Disaster Management — Plan earlier. Respond faster. Applications: district risk, preparedness, monitoring, response prioritization, infrastructure planning, post-event assessment.
- Infrastructure & Engineering — Build for the flood risk of tomorrow. Applications: site exposure, project screening, future risk, infrastructure vulnerability, operational monitoring.
- Agriculture & Food Security — Understand flood risk where crops are exposed. Applications: district/taluka risk, seasonal intelligence, agricultural exposure, crop-risk assessment, insurance data support.

Decision Types

ASSESS → SCREEN → PLAN → MONITOR → RESPOND

Why FloodGuard — short

ONE FLOOD-RISK LAYER. BUILT FOR MULTIPLE DECISIONS.

- Observed foundation
- Multi-scale
- Multi-horizon
- Decision-ready

CTA: WHY FLOODGUARD → anchors to About.

Final CTA

YOUR SECTOR. YOUR RISK. YOUR DECISION. → GET STARTED

9. ABOUT US

Role: Human, credible story of who is building FloodGuard and why.

Hero

BUILDING INDIA'S FLOOD INTELLIGENCE LAYER.

FloodGuard is a team working across climate science, geospatial intelligence and data systems to make flood risk more understandable, accessible and actionable.

Vision

NO DECISION MADE BLIND TO CLIMATE RISK.

A world where people, organizations and communities can make decisions with a clear understanding of the climate risks around them.

Mission

TURNING UNCERTAINTY INTO INTELLIGENCE.

We connect observations, geospatial information, real-time signals and future climate projections to create intelligence that is clear, local and decision-ready.

Why FloodGuard

THE DATA EXISTS. THE DECISION LAYER DOESN'T.

Flood risk is shaped by rainfall, terrain, land use, population, infrastructure and historical flood behaviour. These signals often exist separately. FloodGuard brings them together.

What Makes Us Different

- Observed first
- Built for India
- Across time
- Across scale
- Decision-ready

Principles

- Science, first
- Built for India
- Decision-ready
- Reliable when it matters
- Honest about uncertainty

Journey

THE PROBLEM → THE RESEARCH → THE BUILD → THE PRIVATE PREVIEW

Do not invent milestones or dates that have not been formally established.

Team

A SMALL TEAM. A BIG PROBLEM.

Current team presentation can use the genuine founding team and real roles. Do not use filler profiles.

Future

FLOOD IS WHERE WE START.

Build flood intelligence deeply, expand decision support, and eventually extend the architecture toward additional climate hazards as capabilities mature.

Transparency

TRUST REQUIRES TRANSPARENCY.

Be transparent about data, methods, validation and uncertainty.

Final CTA

FLOOD RESILIENCE IS A SHARED PROBLEM. → GET STARTED

10. INSIGHTS

Role: Research and knowledge hub. Keep current content as placeholders until research/use-case material is finalized.

Hero

UNDERSTANDING FLOOD RISK, BEYOND THE MAP.

Research, data stories and practical perspectives from FloodGuard on flood risk, climate intelligence and the decisions shaped by them.

Content categories

- Research — Flood risk, climate data, geospatial intelligence and India's changing risk landscape.
- White Papers — Detailed research on flood risk, climate exposure and decision support.
- Use Cases — Sector-specific applications across insurance, banking, government, infrastructure and agriculture.
- Data Stories — Visual explorations of flood history, rainfall, geographic exposure and changing climate risk.
- Articles — Perspectives on flood science, climate risk, technology and resilience.

Placeholder examples

- 75 Years of India's Flood Story
- Where Flood Risk Concentrates
- When Rainfall Becomes Risk
- Flood Risk & Financial Exposure
- Climate Risk Beyond Historical Data

UX: Research publication library rather than a generic corporate blog. Use maps, charts, visual stories and clear categories.

Final CTA

WANT TO EXPLORE THE DATA YOURSELF? → EXPLORE DISTRICT RISK

11. GET STARTED

Role: One conversion page for contact, early access, demo, partnerships and general enquiries.

Hero

LET'S TALK FLOOD RISK.

Whether you want to explore your district, evaluate FloodGuard, book a product demonstration or collaborate with us — start here.

Intent paths

- Explore Flood Risk → Explorer
- Request Early Access → Atlas / Live / upcoming capabilities
- Book a Demo → product/workflow evaluation
- Partner With Us → research, data, technology, distribution, government
- General Enquiry → questions and other conversations

Form

Start with: Name, Work Email, Organisation, Industry, Location/Geography, Intent. Reveal additional questions based on intent.

Demo flow

Product → Geography → Primary use case → Optional portfolio/asset scale → What would you like to see?

CTA: REQUEST DEMO →

What Happens Next

WE READ IT → THE RIGHT PERSON RESPONDS → WE EXPLORE THE FIT

Target response language: We aim to respond within 2 business days, only if the team can consistently meet it.

Final CTA

HAVE A FLOOD-RISK QUESTION? → GET STARTED

12. REMAINING UTILITY PAGES + FINAL QA

- Privacy Policy — retain and legally review.
- Terms of Use — retain and legally review.
- 404 page — simple FloodGuard branded recovery path.
- Global footer — finalize links after all pages are locked.
- Mobile navigation — accordion structure for Products, Platform and Solutions.
- Dark/light theme — test every page and state; dark for intelligence/operational surfaces, light for documentation/analysis.
- CTA consistency — Explorer, Request Early Access, Book a Demo, Partner With Us, Get Started.
- Terminology consistency — Explorer, Atlas, Live; Platform; Solutions; Insights.
- Technical claims — validate exact dataset counts, projection years, scenarios and performance claims before publishing.
- No fake trust signals — no fabricated customers, testimonials, alerts, certifications or live metrics.

FINAL WEBSITE STORY

DISCOVER → EXPERIENCE → UNDERSTAND → MONITOR → EVALUATE → TRUST → CONVERT

Home → Explorer → Atlas/Live → Solutions → Platform/About → Get Started

This is the working master for the website team. Detailed sector use cases and white papers can be inserted into Solutions and Insights later without changing the core information architecture.

Document note

Prepared from the website content and UX decisions established in this conversation and the uploaded FloodGuard website materials. Exact technical claims should be reconciled against the canonical product/technical specification before publication.
